

Endeavor Main Screen

Endeavor Answer Patient Call Screen

Endeavor Patient Information Screen

The Endeavor advanced audio/visual nurse call system provides advanced features not found in other systems in its class.

The simplicity of the user interface makes it easy for all users to operate. The system's options and features are displayed in both text and graphics along the bottom of the screen. All can be accessed with the click of a button.

Active calls are displayed in an easy to read list that includes the room number and bed that placed the call, the type of call that was placed and a call timer. Press the Answer Call button and automatically answer the highest priority call and assign the patient's request to the correct staff member in one step.

Endeavor will support advanced interfaces with systems such as radio paging, admissions computers, infrared staff tracking, wireless phones, and telemetry. It will also communicate with the West-Call Odyssey Plus, West-Call TQI reporting system and West-Call CDT to report code blue and other call types remotely.
