

A variety of signaling devices may be used with the Endeavor system. Each switch on the device is connected to one of the Endeavor I/O board's 32 ports. Each port can be individually programmed to allow complete customization of every system. Devices include latching and momentary switches, pulsing inputs, zone lights, and duty stations. There are seven flash rates and tones that may be assigned to each switch. All devices may be programmed to page any number of pagers and can be displayed when using a CDT.

All West-Call® Endeavor switch panels have anodized aluminum faceplates.

DESCRIPTION	MODEL NUMBER	BACK BOX SIZE
1 button panel	EV-PNL-101	1-gang
2 button panel	EV-PNL-102	1-gang
